1 The proactive security toolkit and applications 88%

Boaz Barak , Amir Herzberg , Dalit Naor , Eldad Shai

Proceedings of the 6th ACM conference on Computer and communications security November 1999

Existing security mechanisms focus on prevention of penetrations, detection of a penetration and (manual) recovery tools. Indeed attackers focus their penetration efforts on breaking into critical modules, and on avoiding detection of the attack. As a result, security tools and procedures may cause the attackers to lose control over a specific module (computer, account), since the attacker would rather lose control than risk detection of the attack. While controlling the module, attacker may ...
